

FUTURE HEALTH TODAY

Changing the course of chronic disease

Future Health Today is a software platform **designed by primary care for primary care.**

It **streamlines the identification and management of chronic disease**, assisting in patient recall, care plans, point of care decision support, and in-house QI activities.

We're looking for forward-thinking general practices to join Future Health Today

You can support this research project by:

- using the Future Health Today tool for 12 months and providing feedback*
- nominating a Practice Champion to encourage the use of Future Health Today at your practice*
- participating in specific projects, eg trial new chronic disease modules, test new functionality**
- participating in education and QI activities**

*required | **optional

Interested?

FHT-project@unimelb.edu.au

Your practice will receive **\$600** as compensation for the short time taken to install the software and the Practice Champion will receive **\$200**. Staff who participate in feedback, QI or education activities will be eligible to receive **CPD points**.

What is Future Health Today?

FHT uses patient records to automate the identification of patients who:

- are **at risk** of chronic disease;
- have a chronic disease but **no recorded diagnosis**; or,
- are **living with chronic disease** and may benefit from optimised management.

FHT provides:

- **clinical decision support** to optimise appropriate testing, diagnosis, treatment and management;

- **guideline concordant care recommendations** relating to the identification and management of chronic diseases;

- **potential economic benefits** via identification of patients who may be eligible for GP Management Plans and Health Assessments; and,

- **quality improvement, education and capacity building** opportunities
